SUMMARY

Senior PHP/Laravel Developer with 6+ years of experience delivering scalable web applications. Skilled in Laravel, Vue.js, GraphQL, and Node.js with strong expertise in REST APIs, real-time apps, and database optimization. Proven track record of building enterprise-grade solutions, mentoring junior developers, and thriving in remote Agile teams.

EXPERIENCE

Web Developer

INDEX Holding

📅 2023 – Present

📍 Remote/Onsite

- Developed enterprise-grade Laravel apps integrated with Vue.js.
- Built secure REST APIs supporting thousands of daily users.
- Implemented unit testing and CI/CD pipelines (reduced errors by 40%).
- Collaborated with Agile teams to deliver projects on time.

Web Developer

Technology Brainz

📅 2019 – 2023

📍 Remote/Onsite

- Delivered full-stack solutions using Laravel, Vue.js, MySQL.
- Mentored 4 junior developers, introduced coding standards.
- Optimized queries/caching, cutting response time by 30%.
- Built Vue.js UIs improving customer engagement.

KEY PROJECTS

Enova Bids – Real-time Auction Platform

Node.js, React.js, Redis, WebSockets

- Built a real-time auction system with WebSockets delivering sub-100ms latency.
- Scaled platform to handle thousands of concurrent bidders across multiple auctions.
- Integrated Redis-based caching to optimize real-time bidding operations.
- Designed React.js UI with live updates, notifications, and bidding dashboards.

- Implemented secure authentication, payment integration, and audit trails.
 - Collaborated with distributed team following Agile/Scrum practices.
-

E-vent – Event Management System

Laravel, GraphQL, Vue.js, MySQL

- Designed and developed GraphQL APIs for event scheduling, sessions, and attendees.
 - Built Vue.js dashboards with interactive scheduling, live updates, and reporting tools.
 - Implemented role-based access control for organizers, sponsors, and participants.
 - Optimized backend queries and caching, reducing load times by 35%.
 - Integrated real-time notifications, ticket booking, and payments.
 - Increased system reliability and scalability for events with thousands of users.
-

KwelaApp – Ticketing & Booking Platform

Laravel, Blade, MySQL, REST APIs

- Developed complete ticketing and booking system with secure payment processing.
 - Built REST APIs enabling mobile app integration and third-party services.
 - Created organizer dashboards with detailed reporting and analytics.
 - Designed booking flow reducing checkout friction, increasing conversions by 25%.
 - Implemented refund, cancellation, and automated email notification workflows.
 - Enhanced security with token-based authentication and rate limiting.
-

Laugh Factory – Entertainment Platform

CodeIgniter 3, PHP, MySQL, jQuery

- Maintained and extended a high-traffic entertainment platform serving millions monthly.
 - Migrated legacy modules, optimized backend performance and SEO rankings.
 - Built content management features for comedy shows, videos, and events.
 - Improved mobile responsiveness and front-end UX using jQuery and Bootstrap.
 - Automated content publishing workflows for editors and admins.
-

Geo Nova Labs – Geo Data Platform

Laravel, Blade, PostgreSQL, REST APIs

- Developed backend infrastructure for large scientific geospatial datasets.
 - Designed REST APIs consumed by researchers and data visualization tools.
 - Implemented data security measures with role-based access and logging.
 - Optimized PostgreSQL queries and indexing for big-data performance.
 - Improved documentation, onboarding guides, and user adoption.
-

Abstract.index.ae – Corporate Events

Laravel, MySQL

- Built enterprise platform for managing international conferences and exhibitions.
 - Designed multi-user dashboards for sponsors, exhibitors, attendees, and organizers.
 - Automated event workflows including registration, scheduling, and ticketing.
 - Integrated Docker-based deployment for scalable hosting.
 - Supported 10k+ active participants across multiple events.
-

Market.index.ae – B2B Marketplace

Laravel, MySQL

- Developed a secure B2B marketplace with vendor, buyer, and admin dashboards.
- Designed GraphQL APIs for real-time product listings, bids, and orders.
- Integrated payment gateways, invoice generation, and financial reports.
- Optimized database queries to handle thousands of concurrent product views.
