SUMMARY

Senior PHP/Laravel Developer with 6+ years of experience delivering scalable web applications. Skilled in Laravel, Vue.js, GraphQL, and Node.js with strong expertise in REST APIs, real-time applications, and database optimization. Proven track record of building enterprise-grade solutions, mentoring junior developers, and thriving in remote Agile teams. Experienced in using AI-assisted development tools (Claude Code, Cursor, ChatGPT/Claude) to speed up delivery, automate repetitive engineering tasks, and streamline design-to-code workflows.

EXPERIENCE

Senior Software Engineer — Techlio Pvt Ltd

2025 – Present | Onsite

- Developed enterprise-grade Laravel apps integrated with Vue.js.
- Built secure REST APIs supporting thousands of daily users.
- Implemented unit testing and CI/CD pipelines, reducing errors by 40%.
- Collaborated with Agile teams to deliver projects on time.
- Used Claude Code and Cursor for agentic coding, speeding up feature development and cutting manual boilerplate work.
- Applied AI-assisted debugging and test generation to catch edge cases earlier and raise code coverage.
- Automated recurring development tasks — CI/CD scripts, code documentation — with AI tools to streamline team workflows.

Web Developer — INDEX Holding

2023 – 2025 | Onsite

- Developed enterprise-grade Laravel apps integrated with Vue.js.
- Built secure REST APIs supporting thousands of daily users.
- Implemented unit testing and CI/CD pipelines, reducing errors by 40%.
- Collaborated with Agile teams to deliver projects on time.
- Used ChatGPT and Claude for coding assistance, accelerating API development and troubleshooting.
- Generated code documentation and inline comments with AI tools to improve codebase maintainability.

Web Developer — Technology Brainz

2019 – 2023 | Onsite

- Delivered full-stack solutions using Laravel, Vue.js, and MySQL.
- Mentored 4 junior developers and introduced coding standards.
- Optimized queries/caching, cutting response time by 30%.
- Built Vue.js UIs improving customer engagement.
- Began adopting early AI coding assistants toward the end of tenure to speed up delivery on final project cycles.

CORE SKILLS

Laravel, PHP, Vue.js, GraphQL, Node.js, REST APIs, MySQL, PostgreSQL, MongoDB, SQL, NoSQL, Redis, Docker, Git, Agile/Scrum, WebSockets

AI-Assisted Development: Claude Code, Cursor, ChatGPT/Claude AI, Figma AI/MCP (design-to-code)

EDUCATION

University of Sargodha
BSc Information Technology | 2015 – 2019 | Pakistan

Imagine Foundation e.V.
Imagine Fellowship, Career Coaching and Development Program | Dec 2024 – Dec 2025

SELECTED PROJECTS

Enova Bids — Real-time Auction Platform

- Built a real-time auction system with WebSockets delivering sub-100ms latency.
- Scaled platform to handle thousands of concurrent bidders across multiple auctions.
- Integrated Redis-based caching to optimize real-time bidding operations.
- Designed React.js UI with live updates, notifications, and bidding dashboards.
- Implemented secure authentication, payment integration, and audit trails.

E-vent — Event Management System

- Designed and developed GraphQL APIs for event scheduling, sessions, and attendees.
- Built Vue.js dashboards with interactive scheduling, live updates, and reporting tools.
- Implemented role-based access control for organizers, sponsors, and participants.
- Optimized backend queries and caching, reducing load times by 35%.

KwelaApp — Ticketing & Booking Platform

- Developed complete ticketing and booking system with secure payment processing.
- Built REST APIs enabling mobile app integration and third-party services.
- Designed booking flow reducing checkout friction, increasing conversions by 25%.
- Implemented refund, cancellation, and automated email notification workflows.

Market.index.ae — B2B Marketplace

- Developed a secure B2B marketplace with vendor, buyer, and admin dashboards.
- Designed GraphQL APIs for real-time product listings, bids, and orders.
- Integrated payment gateways, invoice generation, and financial reports.
- Optimized database queries to handle thousands of concurrent product views.

HOPE International — "Where We Serve" Page (AI-Assisted Design-to-Code)

- Implemented a Figma design as a responsive HTML/Tailwind CSS page using Figma's MCP integration to extract design tokens, typography, and layout directly from source files.
- Built a complete single-file responsive implementation including a world map, region cards, and footer — cutting manual design-to-code translation time.
